Professional Summary

Full Stack Developer with 3 years of hands-on experience in designing, developing, and deploying scalable web applications using C#, .NET, Angular, React, and SQL. Proficient in building robust APIs, implementing responsive front-end interfaces, and optimizing database performance. Adept at working in Agile environments, collaborating across teams, and delivering clean, maintainable, and high-performing code aligned with business goals.

Roles & Responsibilities

- Contributed to the development and maintenance of web applications, ensuring stability and smooth functionality for end-users.
- Implemented new features and resolved bugs in collaboration with senior developers, improving overall application performance.
- Assisted in database management with optimized SQL queries, supporting faster data processing and reduced errors.
- Actively engaged in Agile processes such as sprint planning and code reviews, contributing to consistent on-time project delivery.

Projects

Project 1: Revenue Management System (Feb 2025 – Present)

Company: Esyssoft

Designed and developed a smart metering-based billing system for electricity and gas, implemented for a client in Azerbaijan. Enabled multiple payment methods including cash, UPI, and other digital modes, providing flexibility for end-users. Automated monthly bill generation with support for advance payments and due amount tracking, improving transparency in collections. Implemented a hierarchical structure for operations, dividing the country into divisions, subdivisions, circles, and smaller administrative units for efficient management. While not intended for audit purposes like SAP, the system is highly effective for revenue collection, monitoring, and operational efficiency, making it a practical solution for utility providers.

Technologies Used: C#, .NET, PostgreSQL, React, Postman, Azure DevOps, Git

Project 2: Intell Billing (Feb 2023 – Feb 2025)

Company: Prodat IT Solutions

Developed a comprehensive, module-based application using a microservices architecture to manage diverse roles and functionalities within a hospital environment. Integrated

multiple modules such as Patient, Provider, Insurance, Claim, Payer, Facility, Remittance Report, Appointment Scheduling, Tasks, and Form Builder to streamline operations and improve efficiency across departments. Enabled seamless interaction between modules, ensuring scalability, maintainability, and better performance of the overall healthcare management system. Worked on OCR-based automation using Azure and AWS platforms.

Technologies Used: Java, Spring Boot, Azure and AWS SDK, TypeScript, MySQL, Angular, Postman, Jira, Git

Project 3: Inventory App (Mar 2024 – Jun 2024)

Company: Prodat IT Solutions

Developed a business management system using Microsoft Power Apps, Power Pages, Dataverse, and Azure Functions. Integrated the system with QuickBooks to streamline financial operations by automating the creation of purchase invoices, sales invoices, goods received notes (GRN), items, vendors, customers, and tax processes. Designed and implemented scalable solutions leveraging Azure Functions (Java) to ensure smooth data flow and process automation.

Technologies Used: Microsoft Power Apps, Power Pages, Dataverse, Azure Functions (Java)

Technical Skills

Programming Languages: C#, Java, JavaScript, TypeScript

Frontend: React, Angular, HTML, CSS

Backend: .NET, Spring Boot

Databases: PostgreSQL, MySQL, Dataverse

Tools: Eclipse, Visual Studio (Community Edition), Postman, Jira, Azure DevOps

Cloud Platforms: Microsoft Azure, AWS

Low-Code Tools: Power Apps, Power Pages

Academic Highlights

Completed SSLC in 2016 with a CGPA of 9.0

Completed PUC in 2018 with a score of 86%

Graduated with a Bachelor's degree in 2022 with a CGPA of 8.39
